Adrian Rivera G.

Fullstack Developer
Área metropolitana de Ciudad de México

Experiencia

LarEngine
Core team
enero de 2024 - Present (9 meses)
Miguel Hidalgo, CDMX, Ciudad de México, México

At Larengine, I contribute to the development of cutting-edge technologies
using C and Zig. My role involves leveraging Git and GitHub for efficient
version control. I am deeply involved in writing a new JavaScript runtime called
Lar, utilizing the powerful capabilities of JavaScriptCore libraries. Additionally,
I am working on building a JavaScript interpreter from the ground up in Zig,
where we are meticulously designing and implementing the lexer, parser,
and AST from scratch. This work is crucial in advancing the performance and
flexibility of the runtime.

Fiverr
Freelance
agosto de 2019 - Present (5 años 2 meses)
México, México

As a seasoned freelance developer, I bring a wealth of experience in crafting
highly interactive and user-friendly interfaces using modern frameworks like
React, Vue, and Svelte. On the backend, I have a strong command of Node.js
and Express, with extensive experience in working with MongoDB, Nest.js, and
occasionally MySQL to build robust and scalable applications. My expertise
extends to desktop development, where I create efficient and powerful bots
using Electron.js. Additionally, I develop hybrid mobile applications utilizing
React Native Expo and Ionic Capacitor, ensuring seamless cross-platform
performance.

My project portfolio includes building comprehensive e-commerce platforms,
inventory management systems, and real-time chat applications. I am adept
at understanding client needs and translating them into effective, high-
quality solutions, delivering custom code tailored to meet specific business
requirements.

Weku.io

Frontend Developer
marzo de 2019 - diciembre de 2020 (1 año 10 meses)

Frontend Developer | Weku.io

At Weku.io, I worked as a Frontend Developer, where I was responsible for maintaining and implementing new features on the main website. I utilized technologies like Angular and Bootstrap to ensure a smooth and efficient user experience. Additionally, I managed the version control of the main codebase using Git and GitHub, ensuring a collaborative and organized workflow. I also worked with Steem.js to integrate blockchain technology into the platform.
